Intelligent Solutions for Smarter Farming

Dirk Odendaal from Uitkoms Piggery in the Western Cape is the first pig producer in South Africa to fully integrate his sow herd electronically and directly with PigVision, his new pig management software.

Today, PigVision is the new standard for modern pig management data care and solutions. With the use of electronic sow tags and tag readers from Allflex, data can remotely be transferred to the PigVision mobile App, whether a sow needs to be served, weaned, removed or whether you just want to open her sow card for a quick assessment of her production history. All in super-fast time.

Jurgens Reynders from DanBred, assisted with the installation and training of PigVision while Steffan Coetzee from Allflex was responsible for interfacing the Allflex electronic tags and readers with PigVision.

The use of electronic sow tags is obviously not new and is often used in sow feeding systems of which most can interface with PigVision too, but it is the first time that electronic sow tags are used for data entry, stock control and sow management.

AWR 300 - Stickreader

World Leader in Intelligent Livestock Identification Solutions

Allflex Livestock Intelligence provides market-leading animal identification solutions for a wide range of animals including: cattle, sheep, swine, fish, goats , deer, alpacas, camels, horses, and domestic pets as well as zoo animals and a wide range of wildlife species. Each year, over half a billion animals are identified using Allflex products. Animal Identification has evolved over the decades but our heritage and market-leading design, service and manufacturing processes make us the global leader in this field.

Identification is the basis for gathering and managing livestock information. Animal owners globally use our Visual Tags, Tissue Sampling Tags & Collectors, Electronic ID Tags (EID), combined with our Applicators and EID Readers to participate in product branding programs; to comply with regulatory traceability and biosecurity programs, and or, to gather information that enables objective management and health decisions to be made, for improved productivity within their farming enterprises and supply chains.

Electronic Identification Tags

Allflex is the world leader in radio frequency Electronic Identification (EID) applications in animals, which like our visual identification products, are specifically designed and matched to the species and needs - including swine - ensuring the best possible application, retention and read-rate results. Allflex also specialises in providing matched sets of EID -, Visual tags and/or Tissue Sampling products with secure common numbering ensuring stronger traceability systems.
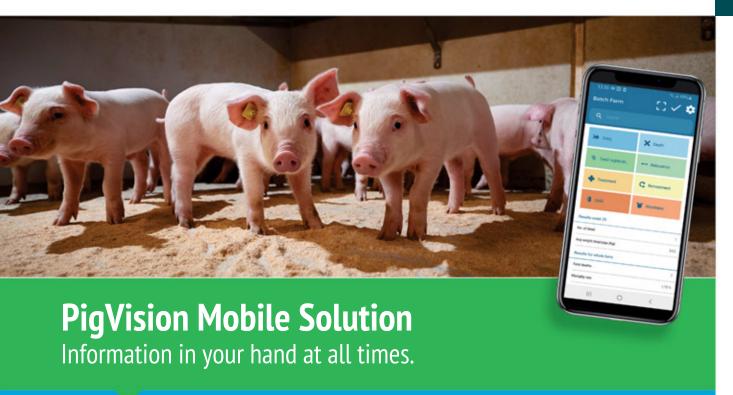

Based on proven ISO 11784 / 785 standards, our Allflex EID tags and EID tag readers are able to fully integrate with Agrovision's Pigvision software, offering pig farmers enhanced automation and 100% accuracy of data capture at the speed of commerce. Linked to advanced farm management programs such as Pigvision, the speed and accuracy of decision-making is greatly enhanced over manual paper-based systems improving farm productivity and process compliance.

Movement recording for traceability programs is faster, more accurate and lower cost than with visual-based systems for the farmer and all movement points in the traceability chain, which explains the regulatory drive worldwide towards EID-based solutions.

Allflex offers a broad range of species and system-adapted EID reading solutions that are critical to a successful management and traceability solution. Allflex Southern Africa stocks and distributes the industry-leading Agrident AWR300 and AWR250 hand-held EID readers for individual animal reading linked directly to the Pigvision software through a Bluetooth connection. Allflex has a proven solution coupled with an extensive class-leading field force to provide technical service.

Learn more about our EID tag readers at www.agrident.com.

PigVision Mobile Solution
Information in your hand at all times.

The PigVision Mobile application is the newest addition to the revolutionary PigVision software.

Information in your hand at all times.

- No paper needed
- Quick, simple, reliable and safe
- Direct registration of insemination, farrowing and weaning
- Direct validation on data entry
- Actual information for management
- On-and offline usage
- Work on several devices at the same time
